Have you had your breakfast yet? If not, grab a bite and learn how this local snack bar manufacturer went from manufacturing zero to 75% of its own bars within a one-year span at their new greenfield facility.

Clif Bar decided to start self-manufacturing to increase its capacity. Finding the right Manufacturing Execution System (MES) was critical. They were looking for an MES that could integrate with other systems, provide flexibility and data analytics, and be adapted to other facilities for standardization.

They chose AVEVA MES, and partnered with an AVEVA Endorsed System Integrator, Apex Manufacturing Solutions. Together they brought the solution to fruition, empowering Clif Bar to setup a culture of continuous improvement.

Performance and operations data is used to drive capital improvements

Energy Monitoring data is available to better understand plant energy usage and drive downward usage trends

Data gathered enabled Clif Bar engineers to quickly model plant processes to facilitate new projects

Using 2 years of Historian data is equipping plant engineers with the ability to conduct predictive analytics

Targeting zero: How water and wastewater utilities can achieve net-zero carbon emissions

Water and wastewater treatment plants are essential for environmental responsibility, but many do not consider their environmental impact. Despite being a significant expense, some utilities are striving to become carbon neutral by reducing direct and indirect greenhouse gas emissions. This may seem daunting, but it is achievable through measures such as energy efficiency improvements, renewable energy integration, and carbon offsetting programs.

The digital plant: A four-step approach to predictive maintenance 4.0

This white paper highlights the importance of data analytics in achieving interoperability in smart plants, with the potential for cost reduction and increased productivity of up to 20%. The adoption of data analytics, robotics, and other technologies can reduce costs by up to 40%. The paper focuses on how metals companies can benefit from real-time data and predictive maintenance strategies to become Industry 4.0-ready. A four-step plan is outlined to help companies implement predictive maintenance successfully.

Did You Know...

- Water and wastewater treatment plants contribute 1-4% of total energy consumption in the US [Source](#)
- 82% of machine failures occur at random intervals [Source](#)
- Predictive maintenance can reduce the time required to plan maintenance by 20% to 50%, increase equipment uptime by 10% to 20%, and reduce overall maintenance costs by 5% to 10% [Source](#)
- According to the White & Case Mining, Metals, and Materials 2022 report, approximately 40% of respondents view ESG and climate-related activism and regulations as the biggest threat to the industry [Source](#)

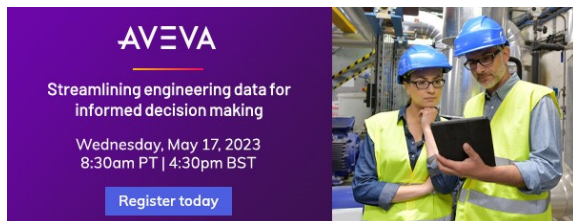

Tech Notes

OI Server Diagnostics not Appearing on Remote Nodes

Within the Operations Control Management Console (OCMC, previously called the SMC or System Management Console), you are able to connect to a remote node within the Operations Interface Server Manager section and access the configuration of the OI Servers installed and running there. However, it is possible to encounter an issue where the diagnostics of the remote OI Servers does not appear within the OCMC. The root cause of this behavior is DCOM authentication hardening settings that are part of newer versions of Windows.

Upcoming & On-Demand Webinars

AVEVA
Streamlining engineering data for informed decision making
Wednesday, May 17, 2023
8:30am PT | 4:30pm BST
[Register today](#)

The banner features the AVEVA logo in white on a purple background. Below the logo is the text 'Streamlining engineering data for informed decision making'. The date and time are listed as 'Wednesday, May 17, 2023 8:30am PT | 4:30pm BST'. A blue button with white text says 'Register today'. To the right of the text is a photograph of two industrial workers in blue hard hats and yellow safety vests looking at a tablet together.

Wednesday, May 17th @ 8:30am PT
Streamlining engineering data for informed decision making

The capital project execution industry needs to improve project control and performance through digitalization and connected decision-making. Learn how to achieve this in the upcoming webinar, including breaking down silos, optimizing projects, and connecting workers with trusted information for better and faster decision-making.

WEBINAR
AVEVA, IDC, MICROSOFT
What's Next for Digital Twins & The Future of the Metaverse
Thursday, June 1, 2023
7:00am PT | 10:00am EST

The banner has a purple background with the word 'WEBINAR' in yellow. Below it, the speakers 'AVEVA, IDC, MICROSOFT' are listed in white. The title 'What's Next for Digital Twins & The Future of the Metaverse' is in white. The date and time are 'Thursday, June 1, 2023 7:00am PT | 10:00am EST'. To the right is a photograph of a man in a plaid shirt looking at a laptop screen that displays a 3D model of a yellow industrial component.

Thursday, June 1st @ 7:00am PT
What's Next for Digital Twins & The Future of the Industrial Metaverse

Join industry leaders from AVEVA, IDC, and Microsoft in a panel discussion to learn how the industrial metaverse and digital twin tech can improve asset life cycle management, supply chain, and collaboration. Discover the benefits of the industrial metaverse, such as a reduction in travel and safety risks and new value opportunities.

On-Demand
Improvements in processes simulation for the refining industry

AVEVA PRO/II Simulation is vital for profitable and efficient refinery operation. Improvements in 2023 allow for better design, analysis, and optimization of refining processes. This webinar will cover market trends and new features such as reactor models, economics unit for cost analysis, and emissions unit for tracking GHG emissions.

On-Demand
Intelligent cloud solutions for real-time industrial data

Cloud-based high-performance data management solutions offer real-time operations data to a wider audience, providing easier access and value from supplier and partner relationships. This webinar explores cloud-driven trends, growth potential, and intelligent solutions for real-time industrial data.
